- ▲ Standard
- Optional

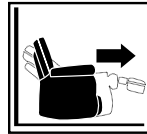

### Power Recliner Mechanism

This optional mechanism allows you to smoothly recline to any position with the touch of a button.

### Optional USB Charging Station

This optional feature is available on the power upgrade of this style. On standard power recliners with the power button on the left arm facing, the power button will include a dual USB charging station.

### Wall Recliner

This style features a zero wall proximity mechanism to allow you to open and recline in any position with the recliner positioned only inches away from the wall.

### Rocking Recliner

This style provides you with the option to either rock back and forth or recline. For your safety, dual rocker locks prevent the recliner from rocking while reclining.

### Swivel Gliding Recliner

This style swivels a full 360 degrees and allows you to glide or recline from any swivel position. While reclining, you can swivel in all directions, but the gliding feature self-locks for your safety.

### Recliner Ottoman/Footrest Note

**To Raise Footrest:** Move recliner handle toward back to release ottoman; footrest will rise.  
**To Close Footrest:** Apply pressure to footrest in a downward motion. Attempting to lower the ottoman with handle can damage the recliner.

### Removable Backs

This style's pieces feature removable backs. This makes the pieces easier to carry and maneuver through doorways.
